### HOLIDAY HOMEWORK

1. A particle is moving in a circle of diameter 5m. Calculate the distance covered and the displacement when it completes 3 revolutions.
2. A body thrown vertically upwards reaches a maximum height 'h'. It then returns to ground. Calculate the distance travelled and the displacement.
3. A body travels a distance of 15m from A to B and then moves a distance of 20m at right angles to AB. Calculate the total distance travelled and the displacement.
4. An object is moving in a circle of radius 'r'. Calculate the distance and displacement
  - (i) when it completes half the circle
  - (ii) when it completes one full circle.
5. An object travels 16m in 4s and then another 16m in 2s. What is the average speed of the object?
6. Vishnu swims in a 90m long pool. He covers 180m in one minute by swimming from one end to the other and back along the same straight path. Find the average speed and average velocity of Vishnu.
7. In a long distance race, the athletics were expected to take four rounds of the track such that the line of finish was same as the line of start. Suppose the length of the track was 200m.
  - (a) What is the total distance to be covered by the athletics?
  - (b) What is the displacement of the athletics when they touch the finish line?
  - (c) Is the motion of the athletics uniform or non-uniform?
  - (d) Is the displacement of an athletic and the distance covered by him at the end of the race equal?
8. Starting from a stationary position, Bhuvan paddles his bicycle to attain a velocity of 6m/s in 30s. Then he applies brakes such that the velocity of bicycle comes down to 4m/s in the next 5s. Calculate the acceleration of the bicycle in both the cases.
9. Amit is moving in his car with a velocity of 45km/hr. How much distance will he cover
  - (a) in one minute and
  - (b) in one second.
10. The odometer of a car reads 2000 km at the start of a trip and 2400km at the end of the trip. If the trip took 8 hr, calculate the average speed of the car in km/hr and m/s.
11. An electric train is moving with a velocity of 120km/hr. How much distance will it move in 30s?
12. A body is moving with a velocity of 15m/s. If the motion is uniform, what will be the velocity after 10s?
13. A train travels some distance with a speed of 30km/hr and returns with a speed of 45km/hr. Calculate the average speed of the train.
14. A train 100m long moving on a straight level track passes a pole in 5s. Find
  - (a) the speed of the train
  - (b) the time it will take to cross a bridge 500m long.
15. A car travels along a straight line for first half time with speed 40km/hr and the second half time with

speed 60km/hr. Find the average speed of the car.

CLASS X PHYSICS  
TOPIC: LIGHT – REFLECTION

## WORKSHEET – 1

	<b><u>One Mark Questions</u></b>
1.	An incident ray makes an angle $35^\circ$ with the surface of a plane mirror. What is the angle of reflection?
2.	Name the spherical mirror which:  (a) has a positive focal length                      (b) always forms a virtual image
3.	The outer surface of a hollow sphere of aluminium of radius 50 cm is to be used as a mirror. What will be the focal length of this mirror? Which type of spherical mirror will it provide?
4.	Redraw the diagram given below in your answer book and show the direction of the light ray after reflection from the mirror.  
5.	What is the nature of the image formed by a concave mirror if the magnification produced by the mirror is: (a) +3                      (b) -1 Predict the size of image in both the cases.
	<b><u>Two Mark Questions</u></b>
6.	Define the focus of a concave mirror. If the radius of curvature of a convex mirror is 30 cm, what would be its focal length?
7.	State and explain the laws of reflection of light with the help of a labeled ray diagram.
8.	List two possible ways in which a concave mirror can produce a magnified image of an object placed in front of it. State the difference, if any, between these two images.
9.	The radius of curvature of a rear-view mirror in a car is 4m. If a truck is behind the car, located 5m from the rear-view mirror of the car. Calculate the size of the image relative to the size of the truck and also find the position and nature of the image formed.
10.	An optical device has been given to a student and he determines its focal length by focusing the image of a sun on a screen placed 24 cm from the device on the same side of the sun.  (a) Name the optical device                      (b) Find its focal length.

11.	<p>Draw the following diagram in your answer book and show the formation of image of the object AB with the help of suitable rays.</p> 
	<b><u>Three Mark Questions</u></b>
12.	<p>Draw ray diagrams to show the image formation by a concave mirror</p> <p>i) For an object placed at the focus (F).</p> <p>ii) For an object placed between centre of curvature (C) and focus (F)</p>
13.	<p>A 4 cm needle is placed 12cm away from a convex mirror of focal length 15 cm. Give the location of image and magnification. What happens to the image if the needle is moved further away from the mirror?</p>
14.	<p>A spherical mirror produces an image of magnification -1 on a screen placed at a distance of 50 cm from the mirror.</p> <p>(a) Write the type of mirror.</p> <p>(b) Find the distance of the image from the object.</p> <p>(c) What is the focal length of the mirror?</p> <p>(d) Draw the ray diagram to show the image formation in this case.</p>
15.	<p>An object 2 cm in size is placed 30 cm in front of a concave mirror of focal length 15 cm. At what distance from the mirror should a screen be placed in order to obtain a sharp image? What will be the nature and the size of the image formed? Draw a ray diagram to show the formation of the image in this case.</p>
16.	<p>It is desired to obtain an erect image of an object, using a concave mirror of focal length 20cm</p> <p>(i) What should be the range of distance of the object from the mirror?</p> <p>(ii) Will the image be bigger or smaller than the object?</p> <p>(iii) Draw a ray diagram to show the image formation in this case.</p>
17.	<p>List the sign conventions for reflection of light by spherical mirrors. Draw a diagram and apply these conventions in the determination of focal length of a spherical mirror which forms a three times magnified real image of an object placed 16 cm in front of it.</p>
